

CAPSTONE PROJECT: "InventMap"

Define Audience: My audience is for all aspiring inventors who are not aware of the steps necessary to bring their ideas to life. Its also for individuals who have not ventured to create products before but may be inspired by our resource to contribute their thoughts in a tangible way.

Definition Statement:

Our product allows users to navigate through our mobile and web page to gain insightful information on putting their idea unto to paper, drawings, patenting, and possibly bringing them to market. It is a site designed to be the one stop shop for all their patenting needs, organized in a clear and concise way to help alleviate anxiety over the patenting and designing process. The site will offer peer review from other inventors and professionals and offer constructive feedback on how to proceed. The sight also has the potential to garner not just moral support but potential financial support from affiliate investors. In addition our site is designed to help other investors be forewarned about the scams of manufacturing and licensing "houses" that exist in the market.

Elevator:

My name is Corwin Watson, I have background in law enforcement, Private Security, and Commercial Locksmithing. I leverage a strong background in consulting on best security practices and leadership. I am an avid learner and pursued Savvy Coders for self-enrichment. I have a mindset that is geared toward protection of people and systems and saw coding as an additional method or tool to benefit our society.

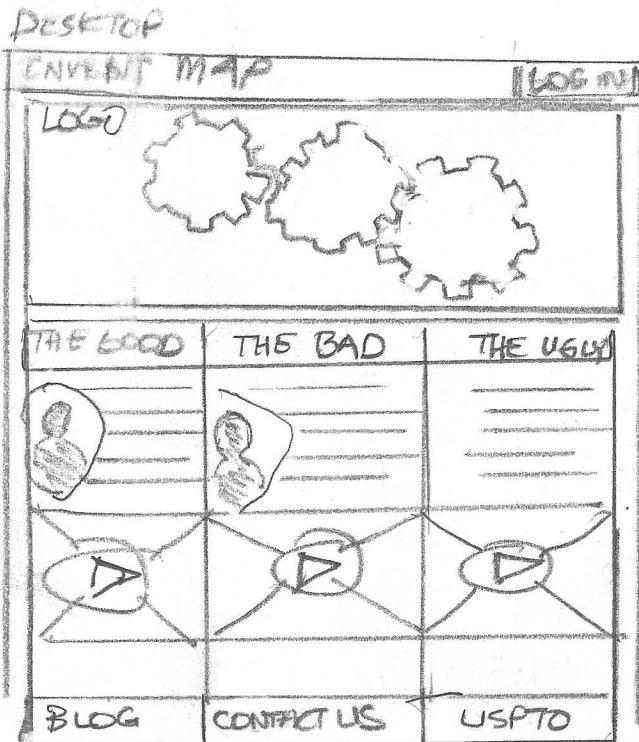

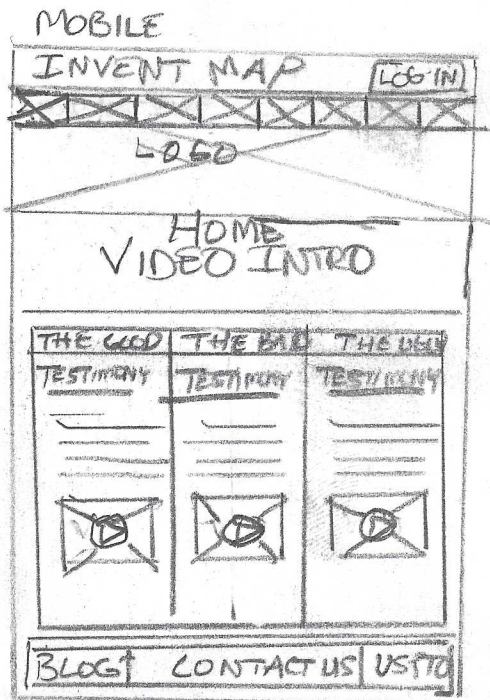

For my capstone project, I decided to create a website and mobile application that is meant to guide future Inventors on the turn-by-turn process of patenting and developing their ideas.

Introduction: My name is Corwin Watson, I have background in Law Enforcement, Private Security, and Commercial. I leverage a strong background in consulting on security best practices and leadership fundamentals. I am an avid learner and pursued Savvy Coders for self-enrichment. I have extensive experience on the physical security side and wanted to become even more versed on the technical and virtual security elements. I wanted to create "InventMap" for my capstone project after creating and development my own patented ideas. After many hours scouring the internet and many hundreds of hours watching youtube videos I was tired and even more frustrated navigating the web and personal resources to find the information. It was a daunting task and as a result, I put my ideas off for some time before I decided it was now or never. As I am still going through
